GLOSSARY OF TERMS

1. Civilian Labor Force - the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.

2. Employed - those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.

3. Unemployed - the number of persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).

4. Unemployment Rate - the number of unemployed expressed as a percent of the civilian labor force.

5. Residence Data - a count of people by where people live.

6. Establishment Data - a count of jobs by where people work.

7. Seasonally Adjusted Labor Force Series - to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed using the X-11 ARIMA method of seasonal adjustment. This is the same method used by the Bureau of Labor Statistics to seasonally adjust the national labor force series.

8. Real Spendable Average Weekly Earnings of Private Nonagricultural Production Workers - represents the earnings of a hypothetical individual after deductions for State income, Federal income and Social Security taxes, and adjustment for change in purchasing power since 1967. This individual is assumed to be sole support for a family of four, earn the average weekly gross earnings of production workers in Montana's private nonagricultural industries, and take standard deductions on State and Federal income taxes. Taxes were computed using standard tax tables, and purchasing power was adjusted by deflating Spendable Earnings based on the national Consumer Price Index.

9. SMSA - Standard Metropolitan Statistical Area - as determined by the Office of Management and Budget. The SMSA must have a central city with a population of 50,000 or more.

10. LMA - Labor Market Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding it.

11. SDA - The Job Training Partnership Act (JTPA) was established to replace CETA in job search, placement, relocation, and especially training assistance. Each state designs local plans for JTPA programs through a Private Industry Council (PIC). Each PIC jurisdiction is known as Service Delivery Area (SDA). The two SDA's for Montana are known as Rural CEP (Beaverhead, Broadwater, Deer Lodge, Granite, Jefferson, Lewis & Clark, Madison, Meagher, Powell, and Silver Bow counties) and Balance of State (the other 46 counties).

12. BENCHMARKING - It is a continuous process of establishing a new set of data which affects the series of estimates through revisions. Once a new benchmark is established, the adjustments to estimates between the new benchmark and the preceding one are carried forward progressively to the current month by use of sample trends. The benchmark is established less frequently (usually once a year) based on sample or secondary data. In case of employment data, the benchmark is used to establish the level of employment, while the sample is primarily used to measure the month - to - month changes in the level.

13. LBPM - Represents Labor Market Projection Model developed by the Lawrence Berkley Laboratory. The basic method of LBPM is a demographic cohort aging model that relies upon 1980 census data, along with labor force trends from Montana's Research & Analysis Bureau.

14. CES-790 Program - current employment statistics survey produces monthly estimates of a wide variety of employment and earnings information for the nation and each state.

INTRODUCTION

The information included in this Annual Planning Information Report (API), is developed to assist the Job Service and Employment and Training planners in developing employment programs and job training plans for fiscal year 1985. Other socio-economic planners and data users should also find the report of value. The API includes information on, and analysis of, (1) statewide and the two service delivery areas established under the Job Training Partnership Act (JTPA), (2) employment and unemployment trends, (3) related economic developments, and (4) occupational and industrial trends. An appendix is also included which contains 1980 census information on the employment by major occupational groups of Montana and each county within Montana. The 1985 data is based on calender year expectation.

Because this report is a general attempt to present information on the labor market to as many people as possible, it must be flexable enough to respond to various and changing reader needs. We would appreciate any suggestions or recommendations you would like to make.

HIGHLIGHTS

One of the most often highlighted observations about the 1980's is that it is the decade during which the baby boom generation will reach maturity and fewer youth will be entering the labor market. In 1985 the age group between 25 and 44 is anticipated to be 55% of the work force.

Many layoffs have occurred in the past three years due to the economic downturn. People and companies and governments are accustomed to waiting out recession and then happily resuming the old pattern. But the old pattern seems to have been broken. Many of those jobs are gone for good, and the workers won't be recalled as they were in bygone times when the economy began moving up.

DESCRIPTION AND RANKING OF MONTANA

Montana can be described as a large, sparcely populated state that depends on natural resources for most of its economic prosperity. Further economic characteristics can be defined by spliting the state into eastern and western halves. The open grass plains of eastern Montana support extensive grain fields and provide grazing for large herds of beef cattle. In recent years, the exploration and development of fossil fuels has been an increasing activity and now a significant employment area. In the mountainous western part of the state the major economic activities are metal mining, lumber and wood product manufacturing, and tourism.

Primary industries determine the direction of a state or local economy. Industries considered primary in Montana include manufacturing, agriculture, mining, tourist related, railroad, heavy construction (highways/electric power plants), and federal government.

Another influence on Montana's economic development is the small business. In the private, nonfarm wage and salary jobs, 43 percent of jobs are in firms with less than 20 employees and 77 percent of workers are with firms that have less than 100 employees.

MONTANA'S RANKING AMONG 50 STATES

Item	Rank	Montana	U.S.
Total population 1980.....	44th	786,690	226,545,805
Land area 1980.....	4th	145,392	3,539,295
Population per square mile 1980.....	48th	5.4	64.0
Percent change in population, 1970-1980..	27th	13.3%	11.4%
Median age 1980.....Years	35th	29.0	30.0
Population 65 years old and over 1980....	30th	10.7% of population	11.3% of population
Persons living in different State in 1975 (5 years old and over) 1980.....	14th	15.0% of population	9.7% of population
Homeownership rate 1980.....	23rd	68.6%	64.4%
Percent high school graduates (persons 25 years old and over) 1980.....	8th	74.4%	66.5%
Unemployment rate 1983.....	27th	8.8%	9.6%
Per capita money income 1983.....	37th	$9,999	$11,400
Motor vehicles per 1,000 population 1980.	6th	908	713
Retail sales per capita 1977.....	6th	$3,692	$3,291

ECONOMIC DEVELOPMENTS AND OUTLOOK

NATIONWIDE

Looking back over 1983, the much anticipated recovery finally arrived. After three years of only marginal growth in the national economy, things started to turn around. The economy began to recover slowly as the interest-sensitive sectors of construction and automobiles enjoyed an environment of declining interest rates. Although by historical standards interest rates were still very high, consumers apparently felt that this was the right time to make those purchases. As nearly everyone knows by now, the automobile companies enjoyed record profits levels in 1983, after record losses a year or so earlier. And in housing the recovery was nearly as impressive.

The second half of 1983 was the real surprise, as recovery proceeded quicker than most expectations. The unemployment rate declined steadily from 10.0 percent in June to 8.2 percent in December. Productivity saw better than average increases, but for many people part-time work was the only work available. Consumer confidence rose steadily and with it, purchases at retail trade stores and production by many manufactures. The recovery was very traditional by economic standards--sequenced with decreased inflation, decreased interest rates, gains in productivity, increased consumer spending, and declines in unemployment.

In general, 1984 will be a continuation of the "classic text-book" recovery that started in 1983. The November election will inhibit significant economic changes as interest rates remain high and unemployment rates fall marginally. Although the federal deficit will again

approach $200 billion in 1984, there is still considerable slack in the economy to avoid any serious threat of inflation. Moreover, an increase in output in recovery periods is usually accompanied by increases in productivity which also dampens inflationary pressures. Interest rates is the influencial factor to watch closely, since interest rates has not stabilized as much as most major elements of our economy.

On the expenditure side, consumer outlays should pretty well follow last year's growth, while business investment and federal government spending are projected to rise at a faster pace than in 1983. State and local government expenditures should also show some modest increases.

Although the labor force normally expands faster as economic conditions improve, demographic trends for the 1980's point to slower growth in the number of job seekers than in the 1970's. In 1983, the labor force grew by slightly under 1.3 percent and 1984 should follow this pattern.

MONTANA

In 1983 Montana's economy realized some recovery but for the most part there was a lull in prosperity. The unemployment rate for the year was 8.8%, which is the highest since the '30s and '40s. Although the unemployment rate was slightly higher in 1983 than 1982, starting in September the unemployment count became less than the same month in 1982. This trend has continued into 1984. The most significant contribution to the improvement came from the lumber and woods industry which saw production at its highest rate in two years. Leading the loss of employment in 1983 was the mining industry, particularly copper mining and oil and gas exploration.

Total nonfarm wage and salary employment for 1982 and 1983 illustrates a real economic weakness. These two years showed lower employment than employment in 1981, an unpreceded situation since 1957 and 1958 employment failed to improve over the 1956 payroll level. During all other recessions, Montana's economy has managed to increase or at least maintain the total number of payroll workers.

As mentioned in the highlights, many jobs have been permanently terminated because of economic conditions and technological changes. Many of these jobs were fairly lucrative and in primary industries. Perhaps the best example of the consequence is reflected in the widening gap between Montana and U.S. per capita incomes. In 1978 Montana's per capita income was 9 percent less than the U.S. average, and in 1983 the gap has increased to 14 percent less. The income picture is not entirely gloomy considering that most Montanas are better

off today, in terms of income, than they were in the mid-seventies. Technology has allowed the return of gold and silver mining with a significant increase in employment and prospects for future development, but at the same time technology has drastically reduced the need for telephone operators in nearly every Montana city.

Economic recovery for Montana will be determined by how well the state's natural resources can compete with our neighboring states and other countries, especially Canada. The level of the interest rate will dictate many economic activities for Montana as well as for the nation. The discount rate for Canadian money is substantially higher (27 percent in May) than in past years, which is a discouragement for Canadians to come down to Montana for shopping and recreation. On a positive note, the new business formations in the first four months of 1984 is 14 percent ahead of last year's pace, indicating a strong desire and confidence from new enterprises to see the Montana economy move forward. The route that Montana's economy will take on the road to recovery will probably be a slow one.

Details of economic development and outlook is broken down by the major industry groups of the standard industrial classification. A historical series from 1950 to 1983 on the larger employment sectors is on page 29.

AGRICULTURE

Agriculture has an important bearing in nearly every county of Montana and influences the bulk of economic prosperity in several counties. The number of farms has been on a steady decline for years but the actual total acreage being farmed has changed very little, resulting in fewer but larger farms. Farm income has a history of fluctuation and is currently at a low due to the surplus grain market conditions and flattened worldwide prosperity. As for employment prospects, a larger number of farm managers is expected, but overall agricultural employment will slowly decline. Seasonal employment still prevails, but there is a growing demand for full-time workers who have the skills to operate and maintain modern farm and ranch equipment.

MANUFACTURING

While Montana has traditionally maintained a low profile in manufacturing payroll as compared to the national average, in terms of employment and income, manufacturing has in the last 10 years emerged as a leading primary industry in Montana. Montana's vast distance from major markets leads to high transportation cost, which keeps the manufacturing activity below the national average.

Manufacturing in Montana is dominated by the lumber and woods industry which is 40% of total manufacturing. The nation as a whole uses only 3 percent of its workforce in forest products manufacturing. Lumber and woods industry activity is strongly tied to interest rates, as the bulk of the products go into construction of new homes. Employment peaked in 1979 but probably will not reach that level in the near future. Competition from the southern states and Canada has reduced the market area, and automation, while increasing productivity, has futher reduced employment. Recovery did begin in 1983, and many mills are currently operating near capacity. Bad times are not uncommon for the forest products industry, but reasonable prosperity should prevail as long as interest rates are stable.

Other manufacturing industries have stabilized and many have returned to increased production. Aluminum and other primary metal industries noticed improvement late in 1983. Non-durable goods does not show much growth as illustrated by the meat product industry's recent closure of two plants in Billings. These plants have since reopened but with a smaller workforce.

MINING

Several years ago coal mining expectations were enhanced by strong electrical growth and national projection models with hugh coal expansion. Now the outlook is for production to remain near the same level as in the past 5 years. Montana's total current coal mining capacity per year is 46 million tons. In 1983, however, only 31 million tons of coal were mined leaving an excess capacity of 15 million tons. Coal mining is based on long term contracts and Montana's production

could be in jeopardy when coal contracts come up for renewal in the early 1990's as other states become more competitive in Montana's market area.

What has dampened the bright outlook for Montana's coal? First, the forecasted consumption models were extremely high, and secondly the legislation which defeated acid rain regulation hurt the production of Montana's low sulfur coal. Increased shipping costs which now total almost three-fourths of the sale price has diminished the market range. Future coal development is very dependent on political policy and transportation expense.

Between 1980 and 1983 oil and gas exploration experienced quite a boom and bust which has seen the number of active rigs slip from 85 to 26. Although the rig count in 1984 is maintaining about the same level as 1983's rig count Montana rig count trails behind the national trend. The Williston Basin continues to be the most active area, and strong interest has developed in the Overthrust Belt in Western Montana, where the geological structure for oil and gas appears good but as yet remains unproven. Vast improvement in the rig count does not seem likely in the near future, but considering that over half of Montana's land is under lease obligation, it would appear that interest in oil and gas exploration is still strong.

Hard rock mining could be described as an industry in transition, in that the large employment mining of the Butte-Anaconda area is being replaced by smaller mines employing 50 to 150 workers. Also, the precious metals (gold and silver) are evolving into the primary product whereas base metals (copper and lead) have become a by-product. The industrial metals (gravel, verniculite, gypsum and bentonite), which meet specialized industrial needs, are very market sensitive. Industrial metals used in construction are currently doing well, but others need further economic recovery before strong production will occur.

Technology has given gold and silver mines the opportunity to expand. The mines, which use highly automated systems, do require long term investment to process the low grade ore. Many of the new and planned mines are located in rural areas and have a 10 to 20 year projected life.

CONSTRUCTION

Construction is another industry tied to interest rates, with resultant depressed employment in the past three years. Increased numbers of building permits in major Montana cities, and planned highway construction projects indicate a stronger year for construction workers in 1984.

A major project, Colstrip power plants 3 and 4, will be completed at the end of 1984. Peak employment was about 2000 and was already down

to 700 in March, 1984. Many of the workers came from out of state and probably will move on to other major projects in the U.S. When the Libby dam was completed in the early 70's, part of the migrant workforce decided to stay--the unemployment rate in Lincoln county increased from 9.0 percent in 1973 to 12.1 percent in 1974 and has continued to remain at the higher lever. Whether completion of Colstrip power plants will have a similar affect on the Billings to Miles City area remains to be seen.

TRANSPORTATION, COMMUNICATION AND UTILITIES

Railroad transportation employment has been declining for many years. Major changes include one rail company pulling out of the state, centralization of workforce and reduction in train repair facilities. The outlook for railroad is strongly tied to agriculture and coal shipments but the size of workforce appears to be stabilizing.

Technology encouraged centralization and a decline of employment in the communication industry. In the past two years telephone operators in nearly every Montana town has lost their job or moved to Billings to continue their work. Public utilities employment will benefit from power plant 3 and 4 at Colstrip, but the utility growth of the past few years has shifted to a slower rate. Most employment in transportations, communication and public utilities is not influenced by a recession; therefore, the outlook is for fairly steady employment.

WHOLESALE AND RETAIL TRADE

Both wholesale and retail trade has experienced two years of declining employment as the consumers reacted to the depressed economy. Automotive dealers were forced to reduce employment and many were forced out of business, but a fast recovery is occurring in auto sales. In the past year, food stores had a decline in activity and responded with layoffs and some store closures. As the recovery picks up, trade employment should respond positively.

Tourism is not defined by the standard industrial classification that is used to describe industries, but most tourist related industries are in retail trade and service industries. Tourism's influence on employment should be positive in 1984 as people are starting to travel more on their vacations.

FINANCE, INSURANCE, AND REAL ESTATE (FIRE)

Employment fluctuation isn's very noticeable in FIRE, but two areas that did react to the recession and recovery were investment firms and real estate agencies. Investment firms realized increased activity early in the national recovery. Real estate employment contraction

was a response to the poor housing market, but in recent months the real estate agencies business has been quite brisk.

SERVICE

Service employment is one majaor sector that managed to increase during the recession. Hotel and motel employment did shrink a bit in 1982 and 1983, but current employment and construction of new facilities is rather positive. If the service industry can continue to grow during a recession, a prosperous economic climate certainly will improve the development all the more.

GOVERNMENT

Government policies often dictate the level of employment. Currently, both federal and state policy is encouraging no growth in employment. Local government is quite influenced by school enrollment and conditions vary around the state, such as Billings considering building another high school to Butte deciding how many grade schools to close.

LABOR FORCE CHARACTERISTICS

The most rapidly expanding part of Montana's civilian labor force (CLF) will be the 25 to 44 year old groups. Negative rates of growth are anticipated for the 16-24 age groups. This profoundly changing CLF structure is the realization of the fact that the "baby boom" generation (those persons born between 1946 and 1960) is getting older.

Female particapation in the labor force will increase more rapidly than male participation. From 1980 to 1985 the CLF will show a 19 percent increase by females but only an 8 percent increase by males. Part of the female growth comes from females who are expected to return to the labor force after a period of childrearing. In 1983 part-time work was used by two out of five female employees--this ratio probably will continue as family obligations will still exist.

The post war baby boom caused the work force to balloon over the past 15 years. But now the job-age population isn't growing nearly so fast because the number of young workers entering the labor force is declining. Growth in the CLF in five year spurts illustrates this slowing down: 1970-1975 18%, 1975-1980 15%, 1980-1985 9%. A declining number of youth would have an impact on industries that rely on low paid youth workers, such as the fast food restaurants.

The listing below has been reduced to employers enrolling their business with the unemployment insurance compensation program. Dropped from the series was new corporations registered with the Secretary of State. Often a duplication count occurred when a new corporation filed with the unemployment insurance compensation program.

Change in series started January 1984, and 1983 was computed for comparison.

EEO AGGREGATED OCCUPATION REPORT
1980 CENSUS OF POPULATION

Source: Census of Population, 1980: Equal Employment Opportunity Special File [machine-readable data file]/prepared by the Bureau of the Census--Washington: The Bureau [producer and distributor], 1982.

This report is based on the Equal Employment Opportunity Special File produced by the U.S. Bureau of the Census. The Equal Employment Opportunity Special File contains sample data inflated to represent the total population. This sample is based on one-out-of-every-six housing units or households for most areas of the country. Areas estimated to contain 2,500 or fewer persons have a three-out-of-every-six sampling rate. Geographic units available from the EEO File include state, SMSA, county, and places with 50,000 or more in population.

SUPPRESSION

To maintain the confidentiality promised respondents and required by law, the Census Bureau takes precautions to insure that its public data, in print or on tape, do not disclose information about particular individuals; therefore, the Bureau suppresses tabulations or characteristics for very small groups of people.

Characteristics of persons are shown for a specific race/Hispanic category if there are at least 30 or more persons in that category living in the geographic area. Data which have been suppressed for a particular category are displayed as zeros. However, a category containing zeros does not automatically indicate suppression since an actual value of zero will also be displayed. Distinguishing between suppressed categories and those which contain true zeros can be determined by referring to the heading of each category. Headings which have an asterisk (*) beside them indicate categories for which the data have been suppressed.

In some cases complimentary suppression is applied to categories containing more than thirty persons to prevent derivation of suppressed data by simple computation.

DEFINITIONS

Civilian labor force. Employed and unemployed civilians.

Employed. Civilians 16 years old and over who were either (a) "at work"--those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) "with a job but not at work"--those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

Unemployed. Civilians 16 years old and over who were neither "at work" nor "with a job, but not at work" and who were:

a) looking for work during the last 4 weeks, and b) available to accept a job.

Examples of jobseeking activities are: (1) registering at a public or private employment office, (2) meeting with prospective employers, (3) checking with friends or relatives, (4) placing or answering advertisements, (5) writing letters of application, and (6) being on a union or professional register.

Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

The concept of experienced unemployed is discussed below under Experienced Civilian Labor Force.

Unemployed, no civilian work experience since 1975. Persons are classified as unemployed with no work experience since 1975 if they reported themselves as unemployed in 1980 and one of the following: (1) their last job since 1975 was in the Armed Forces; or (2) they last worked in 1974 or earlier; or

(3) they reported that they had never worked.

In addition to the above classification, the concept of Experienced Civilian Labor Force appears in certain detailed tabulations.

Experienced Civilian Labor Force. The EEO file includes employed persons and those unemployed persons who have worked at any time in the past, i.e., "experienced unemployed." (Occupation and industry data were not collected for persons who have never worked, or who have not worked since 1974.) Excluding those persons in the category "unemployed, no civilian work experience since 1975," the EEO file essentially defines the experienced civilian labor force.

OCCUPATION. The kind of work the person was doing at a job or business during the reference week, or if not at work, at the most recent job or business if employed since 1975. Persons working at more than one job were instructed to describe the one at which the person worked the most hours during the reference week. Occupation is most frequently tabulated for employed persons 16 years old and over, and less often for the experienced civilian labor force, which includes both employed and experienced unemployed 16 years old and over. Occupation data were also collected but are not tabulated for persons not currently in the labor force who have worked since 1975. Occupation is not determined for persons in the Armed Forces. These data were collected on a sample basis.

The write-in responses to questions 29a and 29b were taken together to assign the respondent to one of 503 occupation categories, coded by specially trained industry and occupation coders in census processing offices. Only the code, i.e., none of the written-in information, is retained on census basic records and public-use microdata. Census occupation categories are fully defined in the Classified Index of Industries and Occupations, PHC80-R3. (persons wishing to use the census system in coding other data bases may use the Alphabetical Index of Industries and Occupations, PHC80-R4.)

Relation to Standard Occupational Classification. The 503 occupation categories generally are based on the Standard Occupational Classification (SOC) system, originally issued in 1977 by the Office of Federal Statistical Policy and Standards and revised in 1980. One of the major purposes of the SOC is to promote uniformity and comparability in the presentation of occupational data collected by various agencies. Public-use microdata documentation and other references will define the relationship between the 3-digit census code and the 4-digit SOC codes.
